Inaugural edition, November 2012

Welcome to the Allflow Systems new GUSHER newsletter

Through over 20 years of experience, Allflow Systems are recognised as market leaders in supplying systems and package solutions tailored to suit our customers needs "on-time every time". We currently have long-standing relationships with many multi-national companies yet have built up our rapport through meeting the detail of the needs of our customers regardless of the demand. As a major player in corrosion-free polyethylene piping systems for water, chemical and air transfer, we can offer a wide variety of services including design, supply, fabrication and installation, sourcing materials and technology both locally and internationally. This has contributed to our success in providing package solutions and problem solving for almost any situation. Our company is constantly striving to offer products and services of the highest quality, innovation and performance levels.

We invite you to enjoy our new newsletter - reaching out to our valued existing and new customers with product information and relevant industry news!

The Allflow team

Allflow GUSHER

QUICK OVERVIEW OF OUR SERVICES

Design and Construction of Corrosion-Free Piping systems including, Polyethylene, PVC, Steel, Concrete and Many other Materials

- Water Supply
- Mine Tailings and Slurry Lines
- Stormwater Drainage
- Submerged Pipelines
- Gas Distribution
- Above Ground
- Industrial & Chemical
- Compressed Air
- Aquaculture
- Rural & Irrigation
- Driplines
- Tank Farm Installation
- Relining and Rehabilitation

MINING INDUSTRY NEEDS

The team at Allflow understands the specific requirements of the mining industry.

Setting up the drainage for a new site? Do you have a tailings or slurry line addition? Need to consider environmental impact? Talk to Allflow today.

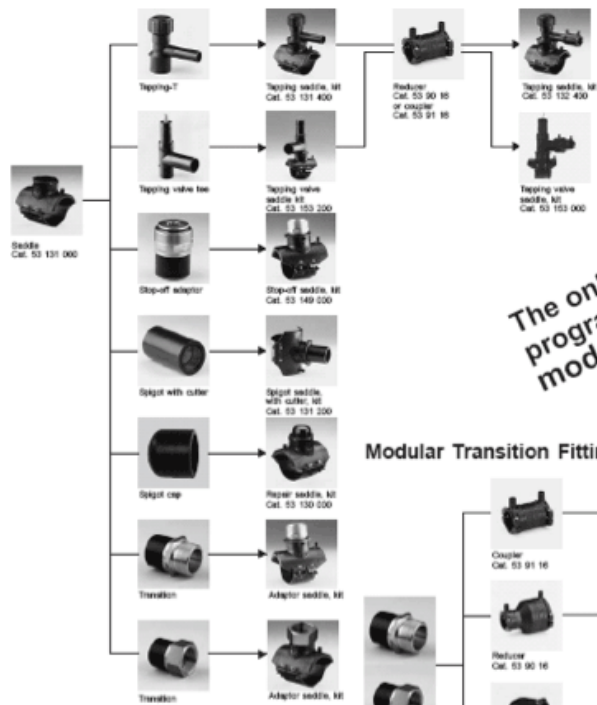

Product Focus

ELECTROFUSION

At Allflow Systems we can offer you the complete range of Electrofusion and Butt Weld PE Fittings. The only programme with a modular system!

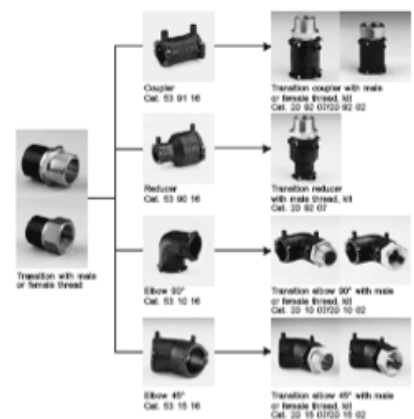

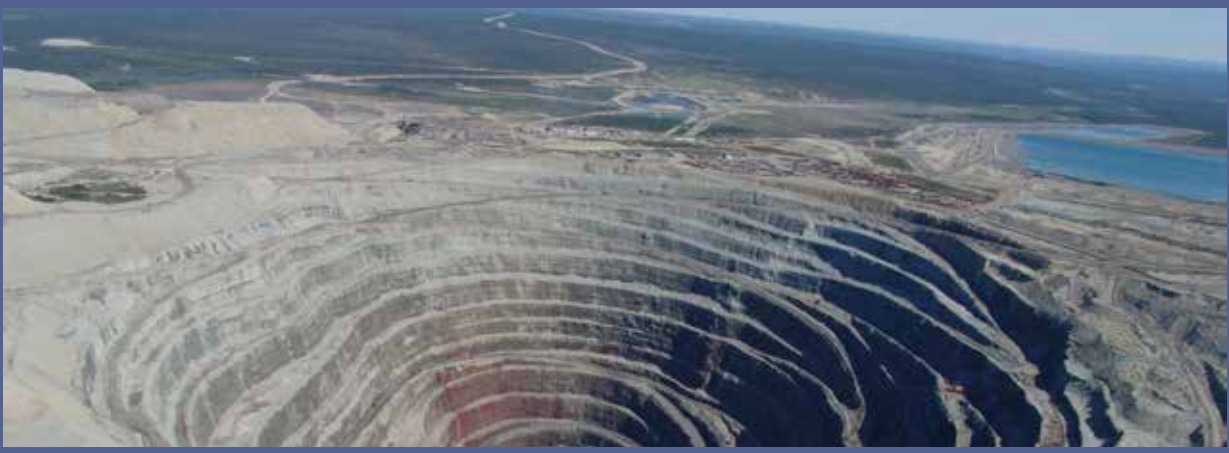

Modular System Saddles

The only programme with a modular system.

Modular Transition Fitting System

Industry Focus

The Mining industry in Australia

For those of our readers currently working in the mining resources industry, the following will already be familiar to you.

Australia's current solid economic structure, and its survival through and past the recent Global Economic Crisis, have been very largely dependant on the mining industry.

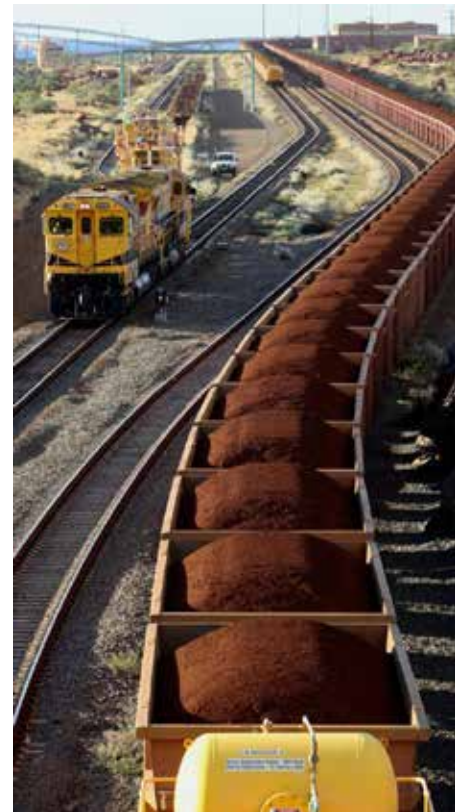

This has resulted in increased public awareness, increased political focus, and a massive influx of immigrants. We're not talking about illegal asylum seekers here. Australia has become a very desirable goal for individuals and families escaping the effects of the GEC, particularly from Europe.

Very loosely, Australia's mining and resource industry consists of three major types of exploration - coal, ore (metals and minerals), and oil / gas. Each of these has its distinct needs, its techniques and tools and so on.

It is important that firms wishing to deal with the mining resource industry, have a proper understanding of the industry's unique and diverse needs. This is true regardless of the nature of your product or service.

The so-called 'mining boom' is not over. Talking about the 'boom' in any depth, actually becomes a little hair-splitting. The popular media have sought to paint a picture of fluctuation and change. The truth is much more solid and, appropriately, down-to-earth.

The mining resource industry remains strong in many ways. Those outside the industry, who wish to benefit from its strength, must work with it closely to gain the best possible understanding and the best possible outcomes for all involved.

Other Services

Mechanical/Industrial process plants
