Allflow - your complete solutions provider

Here at Allflow Systems we do so much more than merely supply piping and fluid transfer products. We are experienced, equipped, and capable of providing complete project solutions.

We understand the needs of projects like yours, and we can take care of the product and installation aspects from start to finish. Allflow provides you with peace of mind, on this important sector of your projects.

The team at Allflow Systems has 25 years experience in the field. From design to commissioning servicing - Allflow can provide 'turn-key' packages, without the hassle.

We have particular experience in the construction industry. We can work with both your design team and with tradesmen on the site, to achieve a seamless project integration.

Bring your next piping project to Allflow and let us help you all the way.

Allflow GUSHER

QUICK OVERVIEW OF OUR SERVICES

Design and Construction of Corrosion-Free Piping systems including, Polyethylene, PVC, Steel, Concrete and Many other Materials

- Water Supply
- Mine Tailings and Slurry Lines
- Stormwater Drainage
- Submerged Pipelines
- Gas Distribution
- Above Ground
- Industrial & Chemical
- Compressed Air
- Aquaculture
- Rural & Irrigation
- Driplines
- Tank Farm Installation
- Relining and Rehabilitation

CONSTRUCTION INDUSTRY NEEDS

The team at Allflow understands the specific requirements of the construction industry. Setting up * commercial / trade waste? * stormwater drainage? * industrial and chemical pipelines? Talk to Allflow today.

Product Focus

DRAINAGE AND TRADE WASTE

PE pipe is increasingly used for transporting industrial, laboratory and trade waste.

It features

- * Smooth bore.
- * Excellent resistance to chemicals and abrasion.

Allflow can assist you right from the design stage, through to completion.

Let us help you select the best products for your project, and the most efficient and cost-effective application.

The fact is, seamlessly integrating our services into your project will cut your costs, and give you the best possible quality outcome.

Construction industry

The construction industry would have to be one of the most diverse collection of skills and applications, gathered under one heading. From broad-scope civil works and mine support sites, to small domestic projects, the 'construction industry' has an impact at all levels across Australia.

It's important, for suppliers to this industry, to understand that with diverse applications come diverse needs. There is no 'one size fits all' solution, when supplying goods for construction projects.

Here at Allflow Systems, we understand this important fact. We offer a diverse array of products and solutions, custom-supplied to meet each specific need.

Industry Focus

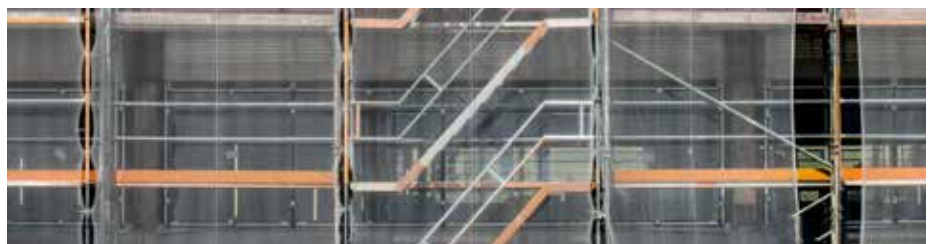

Construction industry news -

SLIGHT LIFT IN CONSTRUCTION WORK FIGURES

Data from the Australian Bureau of Statistics, on the July-September quarter, showed an upturn in construction work. Construction work for the third calendar quarter lifted by 1.7% to approximately \$51.3 Billion, on a seasonally-adjusted basis.

While this result is viewed with disappointment in some quarters, it does show that growth is possible even in the current economic climate.

Combined with the continued downtrend in interest rates - geared to stimulate investment - the outlook for the industry shows some promise, despite the current pressures.

Other Services
